DETAILED ACTION

1. Claims 1-14 remain in the application. Claims 1, 2, 7, and 8 have been amended. Claims 5 and 6 have been cancelled. Claims 9-14 have been withdrawn. Claims 1-4, 7 and 8 have been examined.

Response to Arguments

2. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new grounds of rejection. The amendments to claims 7 and 8 are not substantive with regard to patentability, but rather are cosmetic rephrasings of the previously submitted text. The amendments to claims 1 and 2, which are the only amendments the applicant provided arguments for in the 5/31/2005 correspondence, are addressed in the claim rejection to follow.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. The term "close" in claims 1 and 2 is a relative term which renders the claim indefinite. The term "close" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. The specification instead discloses that the end of the drain pipe is above the opening of the condenser. Given that the single drawing provided is

Art Unit: 3663

simplified and diagrammatic, there is no way to ascertain the three-dimensional relationship between the drain pipe and the condenser.

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gaouditz *et al* (4,022,655) as applied to claims 1-8 in the 6/17/04 Examiner's Answer to Appeal Brief, and further in view of Billig *et al* (5,282,230).
- 3. As discussed in section 2 of this Office action, every limitation of applicant claims 1-8 except for those introduced by the amendments to claims 1 and 2 was addressed by the primary reference as set forth in previous correspondence. However, Gaouditz *et al* does not teach a so-called building condenser in a close local relationship to the upper end of a drain pipe. Billig *et al* discloses a condenser (Fig. 1, 54a) constructed at a higher elevation than the reactor pressure vessel (Fig. 1, 16) that relies upon air circulation to carry gaseous fluids into a reservoir, as does applicant's building condenser. It would have been *prima facie* obvious to one skilled in the art to modify the containment disclosed by Gaouditz *et al* by placing the Billig *et al* condenser nearby and slightly below the duct opening (16) of that primary reference. The motivation for this modification would have been to siphon noncondensible gases (particularly hydrogen) from the area around the condenser within the containment.

Application/Control Number: 09/655,091

Art Unit: 3663

The only structural difference between the Gaouditz *et al* duct and the applicant's pipe is that the former is not straight – note that the shape of the drain pipe was never explicitly claimed in the current application or the prior art. Had the shape of the pipe been claimed, such a limitation would not confer patentability upon the applicant's invention, as changes in shape that a person skilled in the art would have found obvious absent persuasive evidence that the particular configuration was significant are considered a matter of choice (*In re* Dailey, 357 F.2d 669,149 USPQ 47 (CCPA 1966)). Furthermore, the Gaouditz *et al* duct, which fluidly connects the top of the pressure chamber and the condensing chamber (see Fig. 1), is the structural equivalent of the applicant's drain pipe. That is, given the obvious modification described above, it would perform the function specified in claims 1 and 2 in substantially the same manner with substantially similar results. Therefore, the applicant's invention is not patentably distinct from the prior art (MPEP § 2144.04 (IV)).

Conclusion

- 4. The prior art made of record in previous correspondence and not relied upon is considered pertinent to applicant's disclosure.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexandra Awai whose telephone number is (517) 272-3079. The examiner can normally be reached on 8:30-5:00 Monday-Friday.

Art Unit: 3663

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jack Keith can be reached on (571) 272-6878. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
